How can you contribute to the conquest game?

Creating questions:

Each question must be in a separate PNG file. The solution must be an integer or a decimal. The START of each filename must be the solution. Everything afterwards is ignored, so that each of

-1.5 i like cats.png
-1.5.png
-1.5s22p32q8.png

will be recognized as a question with solution -1.5. Feel free to take notes (e.g. source of the question).

Optionally, to mark difficulty, you can add the words **easy, medium, moderate, hard** in the filename:

0.724 easy June 22_12_q7a.png
1.5 medium Nov 20_11_q5.png
1.57 easy June 21_11_Q4.png
2 easy June 20_13_q9b.png

This will make it easier to set up the "bucket system" that determines the order in which questions are assigned.

Avoid picking questions whose solution is easy to guess.

Evaluation and accuracy rules: *(The accuracy rules can be changed if you do not agree with them)*

For integers, the students must provide the exact answer. *(So 1.999 is not accepted as 2, and 27800 is not accepted as 27835)*

For decimals, their answer must be correct to at least 3 significant figures. *(So 1.829 is accepted as 1.83)*

JavaScript does not store trailing zeros, providing (unintended) leniency. *(So 1.5 is wrongfully accepted as 1.50.)*

(I might fix this later.)

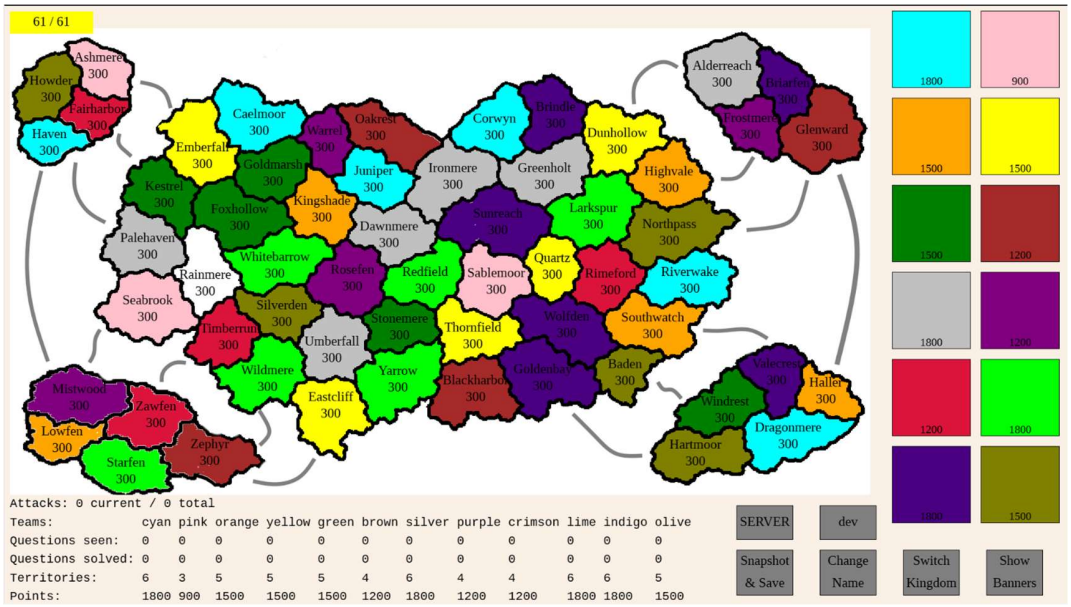
Creating maps:

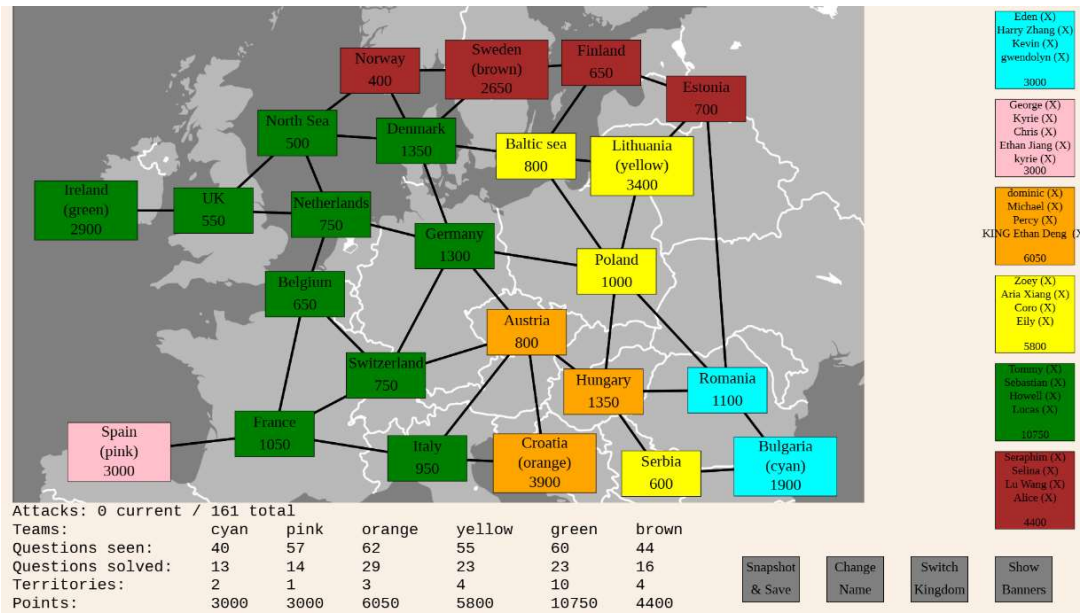
- For colored territories: a 1560x840 map picture in PNG format with **only white pixels** where the territories will be (the game will fill within the borders with the occupying team's color).
  You can have any graphics outside the borders.
- Optionally: you can add a second picture you wish to overlay after the team color was drawn (for example a stylishly drawn label, icons, trees, etc.).

- For colored buttons: any 1560x840 picture in PNG format will do. We can overlay colored buttons over the map, so this is much easier to make – but looks a lot less impressive.

I will make a map editor in April that lets you place, name, and connect the territories on your picture.

Example of a game with colored territories (preferred):





Example of a game with colored buttons:
