How can you contribute to the conquest game?

Creating questions:

Each question must be in a separate PNG file. The solution must be an integer or a decimal. The START of each filename must be the solution. Everything afterwards is ignored, so that each of

-1.5 i like cats.png
-1.5.png
-1.5s22p32q8.png

will be recognized as a question with solution -1.5

Optionally, for particularly hard or easy questions, you can add the words **hard** or **easy** in the filename:

-0.0072 easy.png
3.2 hard trig from winter 23 p 24.png
8s23p13q8nicebinomial.png

This may influence what team gets which question.

Avoid picking questions whose solution is easy to guess.

Evaluation and accuracy rules: *(The accuracy rules can be changed if you do not agree with them.)*

For integers, the students must provide the exact answer. *(So 1.999 is not accepted as 2, and 27800 is not accepted as 27835.)*

For decimals, their answer must be correct to at least 3 significant figures. *(So 1.829 is accepted as 1.83.)*

Creating maps:

- For colored territories: a 1560x840 blank map picture in PNG format with **only black and white pixels** (no grayscale). This will tell the game where the borders of the territories are so it can change their color.
- Optionally, another 1560x840 picture in PNG format with any graphics you wish to draw underneath the territories.
- For colored buttons: only the second picture and instead of changing the color of territories, the game can overlay colored buttons over them.

I will make a map editor in April that lets you place, name, and connect the territories on your picture.

Example of a game map with colored territories:
